

House Bill of Lading (HBL)

User Story

As an Ocean Export operator, I want to create and validate HBL records linked to an existing MBL so that customer-level shipment details are accurate and ready for document issuance.

Form Sections

1. Parties
2. Routing & Service
3. Cargo & Commercial
4. Freight & B/L Status
5. Container & Cargo

DOMESTIC ROUTING / EXPORT INSTRUCTIONS

Submit empty HBL form to capture required-field error state.

Acceptance Criteria

1. User can navigate to the list and open the create form without a UI error or blank screen.
2. All form sections (Identification, Vessel & Routing, Freight & Service, Container & Item Summary) are rendered and scrollable.

- 3. Submitting the form with empty required fields shows inline error messages without a page reload.
- 4. A valid record can be saved and the system redirects to the detail/list view with the new record visible.
- 5. All dropdown (select) options match the values defined in the application constants.
- 6. Date fields only accept valid date input (ISO YYYY-MM-DD) and do not accept free-form text.

Validation Rules

- 1. **HB/L No.*** (`name="hbl_no"`) must not be empty; form must block submission and highlight the field with an error message.
- 2. **Actual Shipper*** (`name="actual_shipper_id"`) must not be empty; form must block submission and highlight the field with an error message.

Field Semantics

Label	Tag	Name	Type	Required	Business Meaning
